The Department of Energy's (DOE's) Bioenergy Technologies Office (BETO) is hosting a Demonstration and Deployment strategy workshop on March 12-13 2014, at Argonne National Laboratory's Advanced Photon Source conference center outside of Chicago, Illinois.

As the bioenergy industry begins commercial scale cellulosic ethanol production, BETO will identify the next step(s) in drop-in hydrocarbon biofuel production. This workshop intends to discuss, reassess, and prioritize the demonstration and deployment efforts needed to realize affordable, scalable, and sustainable production of hydrocarbon biofuels.

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

University, national laboratory, industry, advocacy, government and other stakeholders will consider the following questions:

- What is the state of technology of hydrocarbon biofuel manufacturing, as well as supportive bioproducts or chemicals?
- What are the technical, conversion, feedstock logistics, and market barriers to deployment of hydrocarbon biofuels?
- What are the highest priority barriers and what strategies can overcome these barriers?

The outcomes of these discussions are expected to result in the following

- Determine how BETO can accelerate industry's efforts
- Develop strategy and future plans
- Lead to a breakout session at the Biomass 2014 conference on July 29-30th
