High Performance Windows Volume Purchase Program

Montana Regional Workshop and Windows Exhibit

Who Should Attend? Builders, Contractors, Schools, Universities, Weatherization Agencies, Management for Commercial Buildings, Public Housing Authorities, Non-Profits, Consultants, and Energy Auditors

The purpose of the workshop is to educate stakeholders about the opportunity to purchase high performance windows.

About the Program

DOE's Building Technologies Program (BTP) is coordinating a volume purchase of high performance windows, and low-e storm windows, to expand the market of these high efficiency products. Price is the principal barrier to more widespread market commercialization. The aim of this volume purchase initiative is to work with industry and potential buyers to make highly insulated windows more affordable. ***The minimum order for windows is 20, but there are manufactures in the program that will accept lower quantities.***
