

# Subfreezing Start/Stop Protocol for an Advanced Metallic Open-Flowfield Fuel Cell Stack

Presented at: US DOE New Projects Kickoff Meeting  
Washington, DC

13-14 February 2007

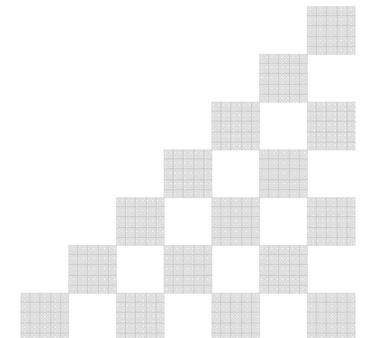

# Objective

---

**This project will demonstrate a PEM fuel cell stack that is able to perform and start up in subfreezing conditions, respecting allowed energy budget, and showing limited impact at extreme temperatures over multiple exposures, without irreversibly degrading its performance more than 5%.**

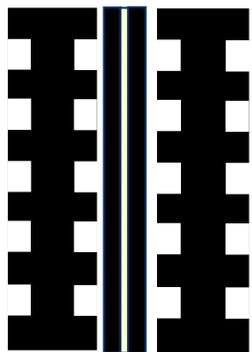

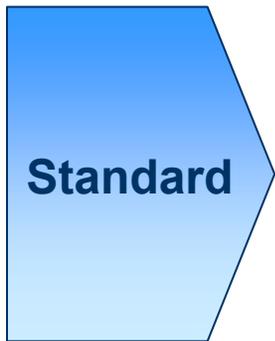

Table 3.4.2. Technical Targets for Automotive-Scale: 80-kW<sub>e</sub>  
(net) Integrated Transportation Fuel Cell Power Systems  
Operating on Direct Hydrogen<sup>a</sup>

Characteristic	Units	2003 Status	2005 Status	2010	2015
Cold start-up time to 50% of rated power	@-20°C ambient temp	120	20	30	30
	@+20°C ambient temp	60	<10	5	5
Start up and shut down energy <sup>f</sup>	from -20°C ambient temp	na	7.5	5	5
	from +20°C ambient temp	na	na	1	1
Durability with cycling	hours	na	~1,000 <sup>g</sup>	5,000 <sup>h</sup>	5,000 <sup>h</sup>
Unassisted start from <sup>i</sup>	°C	na	-20	-40	-40

# Nuvera Technology Differentiators

## Flowfield

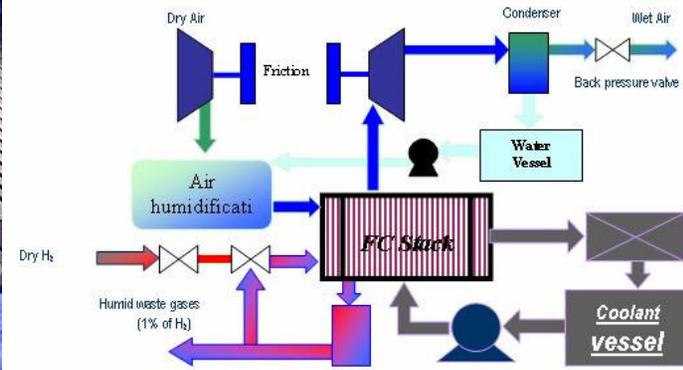

Directed Flow

## BPA Material

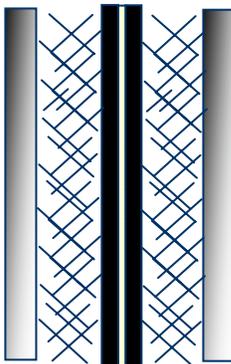

Graphite

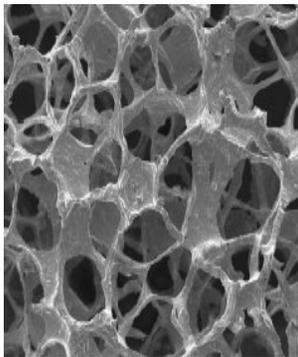

## Humidification

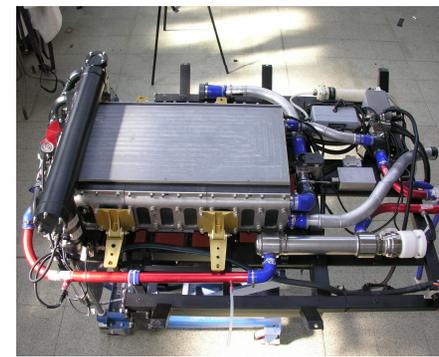

External Humidifier

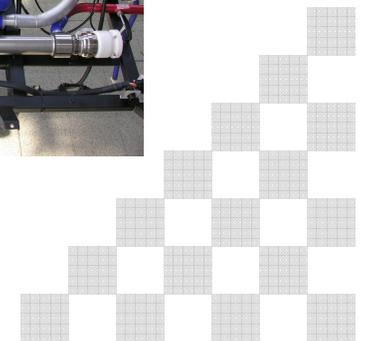

Open Flow

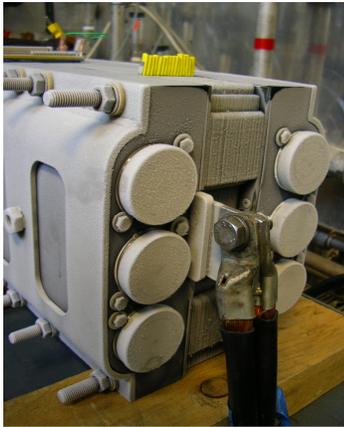

Base Metal Alloy

100% Internal

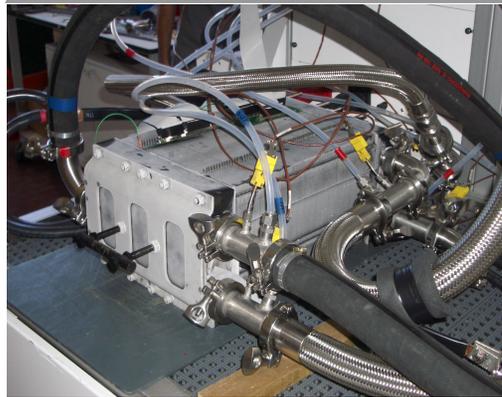

# Cold Operation Experience

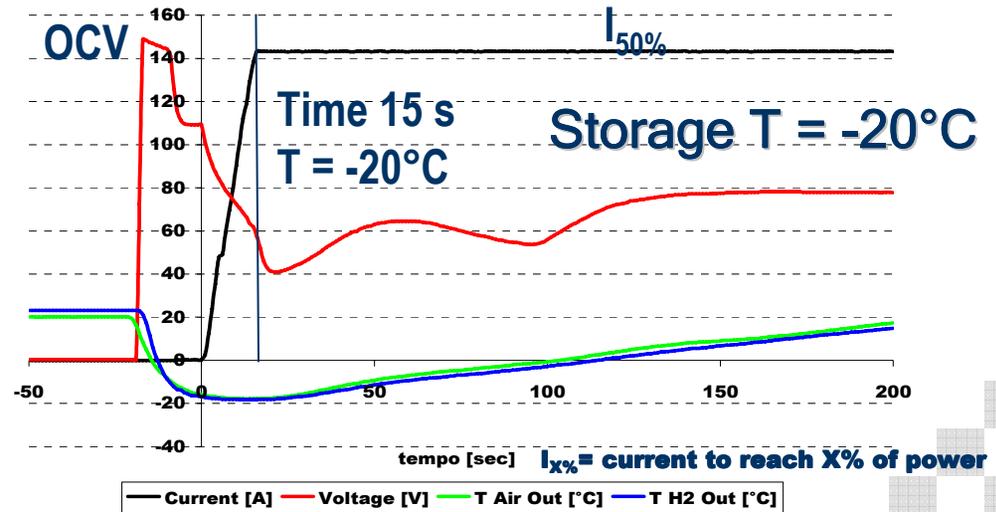

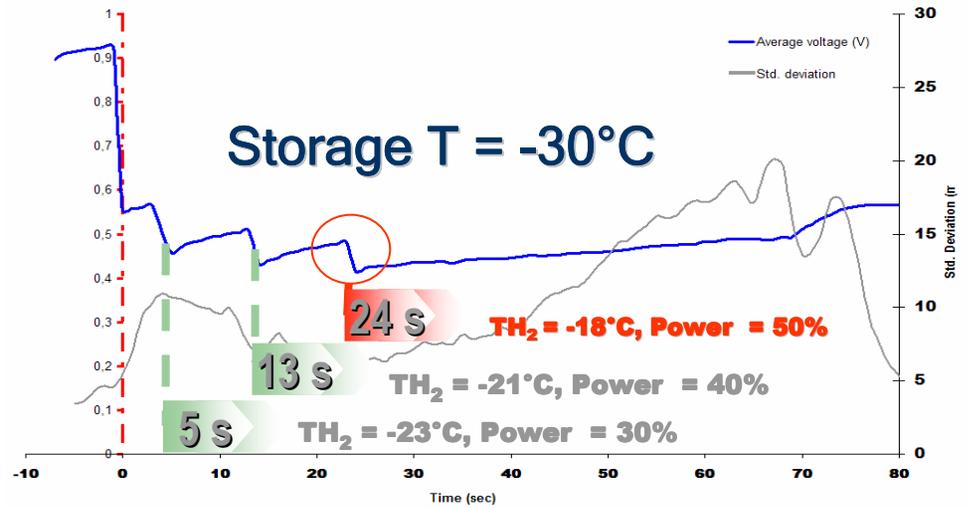

16 cells (3,4 kW power)

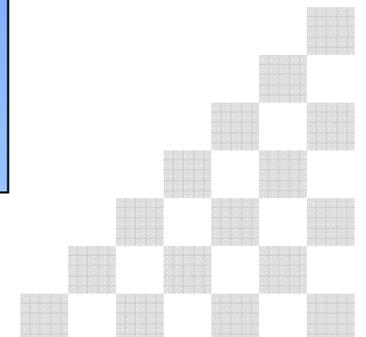

Scale up

128 cells (27 kW power)

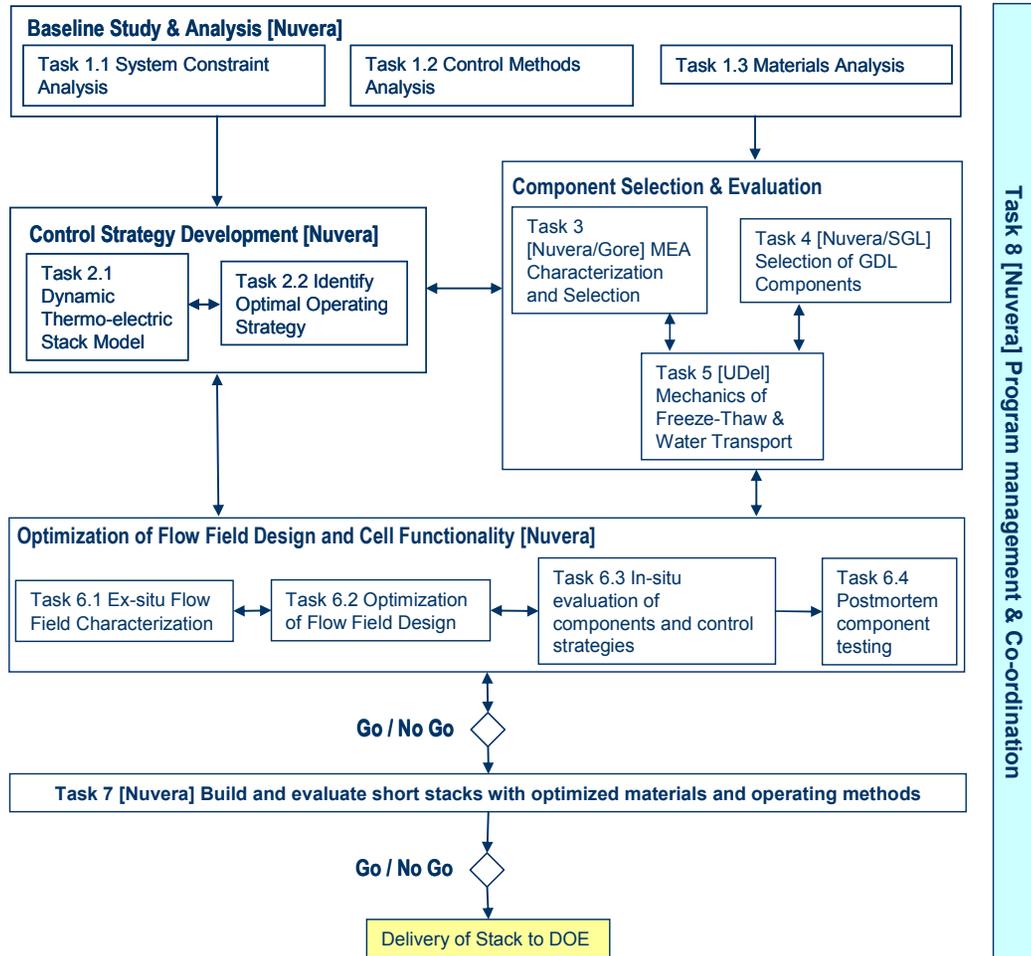

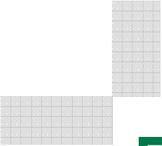

# Approach

# Project Overview

## Project Team:

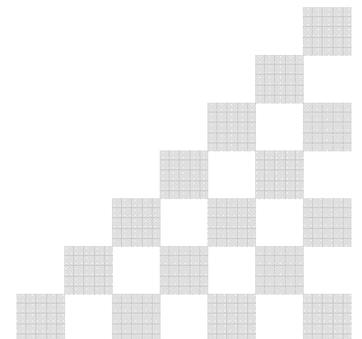

# Budget & Funding Needs

---

**Active project duration is 36 months.**

<b>DOE FISCAL YEAR</b>	<b>2007</b>	<b>2008</b>	<b>2009</b>	<b>2010</b>	<b>TOTAL</b>
Beginning	10/1/06	10/1/07	10/1/08	10/1/09	V
Ending	9/30/07	9/30/08	9/30/09	9/30/10	V
# Active Project Months	6	12	12	6	V
Est'd Project Funding Need	<b>\$631,583</b>	<b>\$2,011,390</b>	<b>\$1,853,661</b>	<b>\$473,854</b>	<b>\$4,970,488</b>

# Summary

## *Specific goals of the project* □

- Start-up to 50% rated power from -20C in 30 seconds using <5 MJ of energy
- Decay <5% with 1000X exposure to -40C

## *Success enablers* □

- Open & low thermal mass flowfield
- Internal humidification
- State of the art material (MEA, GDL) combinations
- Proven methods and targeted controls optimization
- Project Team (Nuvera, Gore, SGL, & Univ of Delaware)
