

Advanced Diesel Combustion with Low Hydrocarbon and Carbon Monoxide Emissions

Poster Location P-19

Gregory K. Lilik, André L. Boehman
Department of Energy & Mineral Engineering
EMS Energy Institute
The Pennsylvania State University
University Park, PA 16802

Objectives

- Probe the effects of high ignition quality fuels on early injection PCCI, specifically HECC.
- Understand the underlying causes of THC and CO emissions during PCCI combustion.
- Reduce THC and CO emissions during PCCI combustion while maintaining efficiency.

Acknowledgment

- LTFT fuel provided by ConocoPhillips and financial support from GM R&D Laboratory.
