Annual Progress Report

HIGH STRENGTH WEIGHT REDUCTION MATERIALS

*Less dependence on foreign oil, and
eventual transition to an emissions-free,
petroleum-free vehicle*

and Renewable Energy**
Bringing you a prosperous future where energy
is clean, abundant, reliable, and affordable

Acknowledgement

We would like to express our sincere appreciation to QSS Group, Inc., Oak Ridge National Laboratory, and Argonne National Laboratory for their technical and artistic contributions in preparing and publishing this report.

In addition, we would like to thank all the participants for their contributions to the programs and all the authors who prepared the project abstracts that comprise this report.

CONTENTS

1. INTRODUCTION	1
2. MATERIALS DEVELOPMENT	3
A. Advanced Materials for Friction Brakes	3
B. Integrated Approach for Development of Energy-Efficient Steel Components for Heavy Vehicle and Transportation Applications	8
C. Development of Technologies for the Application of Magnesium Metal Matrix Composites for Heavy Vehicles	16
D. Lightweight Functional Composite Materials	25
3. MATERIALS PROCESSING TECHNOLOGIES	31
A. Laser Glazing and Friction Stir Processing of Materials to Reduce Friction	31
B. Development of an Advanced Squeeze Casting Process for the Production of High-Integrity Truck Components	38
C. Wrought Magnesium Alloy/Process Development	43
D. Thermomechanical Processing of Ti and Ti-6Al-4V Sheet and Plate from Low Cost Powders	50
E. Counter Gravity (Hitchiner) and Pressure Assisted Lost Foam Magnesium Casting	57
4. ENABLING TECHNOLOGIES	65
A. Joining of Advanced Materials by Plastic Deformation	65
B. Rapid, Low-Cost Tooling Development	72
C. Improved Friction Tests for Engine Materials	75
D. Equal Channel Angular Extrusion Processing of Alloys for Improved Mechanical Properties	79
E. Attachment Techniques for Heavy Truck Composite Chassis Members	86
F. Laser Texturing of Propulsion Materials	95
G. Friction Stir Joined Aluminum Sheet Materials for Heavy Vehicle Cab Structures	103
H. Friction Stir Joining and Processing of Advanced Materials Including MMCs	112
I. Friction Stir Welding and Processing of Advanced Materials	122
J. Portfolio Analysis for Lightweight Materials	135
K. Inventory of Heavy-Duty Truck Lightweighting Candidates	137
L. Basic Studies of Ultrasonic Welding for Advanced Transportation Systems	143
M. Effects of Highway Ice-Clearing Treatments on Corrosion of Heavy Vehicle Materials and Components	153
5. LIGHTWEIGHT VEHICLE STRUCTURES	161
A. Lightweight Trailer-Liburndas Project	161
B. Application of Superplastically Formed Aluminum for Truck Body Panels	166
C. Advanced Composite Support Structures	169
D. New-Generation Frame for Pickup/Sport Utility Vehicle Application	177
E. Advanced Superplastic Forming Development for Heavy Vehicle Structures	179
F. Development of Magnesium for Heavy Vehicle Powertrain Components	184

CONTENTS (CONT.)

G.	Lightweight Stainless Steel Bus Frame—Phase III.....	188
H.	Side Impact Analysis of a Lightweight Stainless Steel Bus Structure.....	193
I.	Stainless Steel Bus Structure – Manufacturing Cost Analysis	198
6.	APPLICATION OF INNOVATIVE MATERIALS.....	203
A.	Carbon Fiber SMC for Class 8 Vehicle Hoods	203
B.	Application of Carbon Fiber for Large Structural Components.....	207
C.	Hybrid Composite Materials for Weight-Critical Structures.....	213
D.	Advanced Composite Structural Cab Components	216
E.	Advanced Composite Structural Chassis Components.....	223
