Washington, DC 20585-0121**

FY 2003

Progress Report for Heavy Vehicle Propulsion Materials Program

**Energy Efficiency and Renewable Energy
Office of FreedomCAR and Vehicle Technologies**

Edward Wall	Program Manager
Rogelio Sullivan	Team Leader, Materials Technologies
Sidney Diamond	Technology Development Area Specialist

March 2004

CONTENTS

1. INTRODUCTION	1
2. MATERIALS FOR FUEL SYSTEMS.....	7
A. Smart Materials for Diesel Fuel Injector	7
B. Cost-Effective Smart Materials for Diesel Engine Applications	15
C. Low-Cost Manufacturing Processes for Ceramic and Cermet Diesel Engine Components	21
D. Intermetallic-Bonded Cermets.....	29
E. Low-Cost, High-Toughness Ceramics	33
3. MATERIALS FOR EXHAUST AFTERTREATMENT.....	37
A. Materials for Exhaust Aftertreatment	37
B. Development of Materials Analysis Tools for Studying NO _x Absorber Catalysts.....	43
C. Development of NO _x Sensors for Heavy Vehicle Applications.....	49
D. Ultra-High-Resolution Electron Microscopy for Characterization of Catalyst Microstructures and Deactivation Mechanisms	55
E. Microstructural Changes in NO _x Trap Materials under Lean and Rich Conditions at High Temperature	61
F. Aftertreatment Catalyst Materials Research	67
4. MATERIALS FOR AIR HANDLING, HOT SECTION, AND STRUCTURAL COMPONENTS.....	73
A. High-Temperature Advanced Materials for Lightweight Valve Train Components.....	73
B. Thick Thermal Barrier Coatings for Low-Emission, High-Efficiency Diesel Engine Components	77
C. Cermet Composites for Wear Applications.....	85
D. Processing and Characterization of Structural and Functional Materials for Heavy Vehicle Applications	89
E. NDE Development for Ceramic Valves for Diesel Engines.....	97
F. Durability of Diesel Engine Component Materials.....	103
G. Life Prediction of Diesel Engine Components	109
H. Low-Cost Manufacturing of Precision Diesel Engine Components	117
I. Infrared-Based Temperature Measurement in Diesel Exhaust Aftertreatment Filters.....	123
J. Advanced Cast Austenitic Stainless Steels for High-Temperature Components	129
K. Microstructure and Creep Properties of TiAl/Ti ₃ Al In-Situ Composites	133
L. Synthesis of Powders for Titanium Carbide/Nickel Aluminide Cermets	139
M. Diesel Exhaust Gas Recirculation Corrosion Effects	145
N. Laser Surface Texturing of Lubricated Ceramic Parts	147
O. Ti-6Al-4V Billet Feedstock Manufacture and Evaluation	153

P. High-Density Infrared Surface Treatment of Materials for Heavy-Duty Vehicles	157
Q. High-Temperature Aluminum Alloys	161
R. Development of Titanium Component Applications in Heavy-Duty Diesel Engines	167
5. TEST AND MATERIALS STANDARDS	169
A. Modification of Engineering Materials for Heavy-Vehicle Applications	169
B. Implementing Agreement for a Programme of Research and Development on Advanced Materials for Transportation Applications	175
C. Mechanical Property Test Development.....	181
Appendix A: ACRONYMS AND ABBREVIATIONS	187
