Interrelationships Limit ZT

$$ZT = S^2 \sigma T / \kappa$$

$$S = S(n)$$

$$\sigma = ne\mu$$

$$\kappa = \kappa_{\text{lattice}} + \kappa_{\text{electronic}}$$

How do we design material with low κ_{lattice} ?

Thermal Conductivity of $(W)_x(WSe_2)_y$

soft

hard

Lowest thermal conductivity ever measured
for a fully dense solid

UNIVERSITY OF OREGON

Ultralow Thermal Conductivity in WSe₂

- Crystalline within sheets
- Disordered between sheets

C. Chiritescu, D. G. Cahill, N. Nguyen, D. C. Johnson, A. Bodapati, P. Keblinski, P. Zschack, *Science* **2007**, 315, 351.

New Lower Limit

K. E. Goodson, *Science* **2007**, 315, 342.

Where else might this be possible?

- Lattice mismatch in the a-b plane $[(AX)_{1+y}]_n(MX_2)_m$
- $n, m = 1$ forms by direct reaction of the elements at $\sim 1000^\circ\text{C}$ for ~ 30 compounds – mostly sulfides
- Compounds can be metallic, semiconducting or insulating (magnetic, superconducting, etc.)
- $(YbS)_{1.24}NbS_2$ $S = 60\mu\text{V/K}$ $\rho = 1.4 \times 10^{-5} \Omega \cdot \text{m}$
 $K = 0.8 \text{ Wm}^{-1}\text{K}^{-1}$ $ZT = 0.1$

$(LnS)_m(NbS_2)_n$ and $(SnS)_m(TiS_2)_n$ $n = 1, 2$ $m = 1$
power factor, $6 \sim 12 \times 10^{-4} \text{ W/m} \cdot \text{K}^{-2}$ at 300K
 $ZT \sim .1 \text{--}.3$ if the K value is $\sim 1 \text{ Wm}^{-1}\text{K}^{-1}$,

Miyazaki, Ogawa, Kajitani, Jap. J. Appl. Physics, 43 (2004) L1202

- $(SnS)_1(TiS_2)_2$ $K_{\text{lattice}} \sim 0.8 \text{ Wm}^{-1}\text{K}^{-1}$,
 $ZT \sim .4$ at 400°C

C. Wan, Y. Wang, N. Wang and K. Koumoto - ICT 2009 Freiburg

Chalcogenide intergrowth compounds

Transition metal dichalcogenide

(e.g. TiSe_2 , NbSe_2 , etc.)

NaCl-like monochalcogenide

(e.g. PbSe , EuSe , etc.)

Chalcogenide intergrowth compounds

Review articles:

G.A. Wiegers, Prog. Solid State Chem. **24**, 1 (1996).

A. Meerchaut, Curr. Opin. Sol. State Mater. Sci. **1**, 25 (1996).

Different atom densities in x-y plane – no epitaxy

Controlled Nanostructure

If the 1:1 structure is stable, all local bonding is satisfied in any compound, $m:n$. Reasonable to assume that all $m:n$ compounds should be at least metastable.

Entire families of compounds can be prepared

Only (00 l) reflections are observed
(* indicates sample holder or substrate)

c-axis repeat thickness

First 64 members of [(PbSe)_{0.99}]_m[WSe₂]_n prepared

Q. Lin et al., Chem. Mater. **22**, 1002 (2010).

Isomers with controlled nanostructure

Four $(\text{PbSe})_4(\text{NbSe}_2)_4$ Isomers

4,4,0,0,0

2,3,2,1,0,0

3,3,1,1,0,0

2,2,1,1,1,1

UNIVERSITY OF OREGON

Many possible isomers ...

Over 200 isomers for n and m
6 or less

Over 20,000 isomers for n
and m 10 or less

A general design principle – materials by design!

Three component ferecystals – precisely controlled modulation doping

Size-induced structural transformations

In-plane Synchrotron X-ray Diffraction

(*hk*0) reflections from individual components

Beam line 33-BM-C, APS
Dr. Paul Zschack

Tunable electrical properties

Seebeck systematically varies with number of TiSe_2 layers

Misfit $(\text{PbSe})_{1.16}(\text{TiSe}_2)_2$
(N. Giang et al.)

Seebeck
-50 $\mu\text{V/K}$

Resistivity
 $2 \times 10^{-4} \Omega\text{m}$

$(\text{PbSe})_{1.16}(\text{TiSe}_2)_2$ ferecystal

Seebeck
-92 $\mu\text{V/K}$

Resistivity
 $3.7 \times 10^{-5} \Omega\text{m}$

Turbostratic TiSe_2

Seebeck coefficients – $a = -170 \mu\text{V/K}$
 $b = -180 \mu\text{V/K}$

Unusual temperature dependence!

Summary

- Many new nanostructured ferecystals can be synthesized.
- Structure of the constituent layers depends on layer thickness.
- Turbostratic disorder observed for all compounds investigated results in ultra-low thermal conductivity.
- Electrical properties depend on composition and nanostructure
- Power factor can be increased using nanostructure
 - Need to measure carrier concentrations

Given a family of compounds $(A)_m(B)_n(C)_p$,

Can one calculate thermal, electrical, and/or magnetic properties?

Can one calculate the trends in properties as a function of m , n , and p ?

Can one suggest which structures A, B or C should be interleaved to achieve a particular property?
