Arlington County Exceeds AIRE 2012 Goal of 10% Emissions Reduction

May 21, 2013 — Arlington County has met and exceeded the 2007 AIRE (Arlington Initiative to Rethink Energy) goal of reducing greenhouse gas emissions from County government operations 10 percent by 2012 from a 2000 base. The County has achieved a reduction of 11.7 percent in its emissions, even as its services and facilities increased, County Manager Barbara Donnellan reported today to the County Board.

Learn more about how we achieved this goal and where we are...

Memorandum

To: Arlington County Board
From: Barbara M. Donnellan, County Manager
Subject: Achieving the AIRE 2012 goal
Date: May 21, 2013
Barbara M. Donnellan

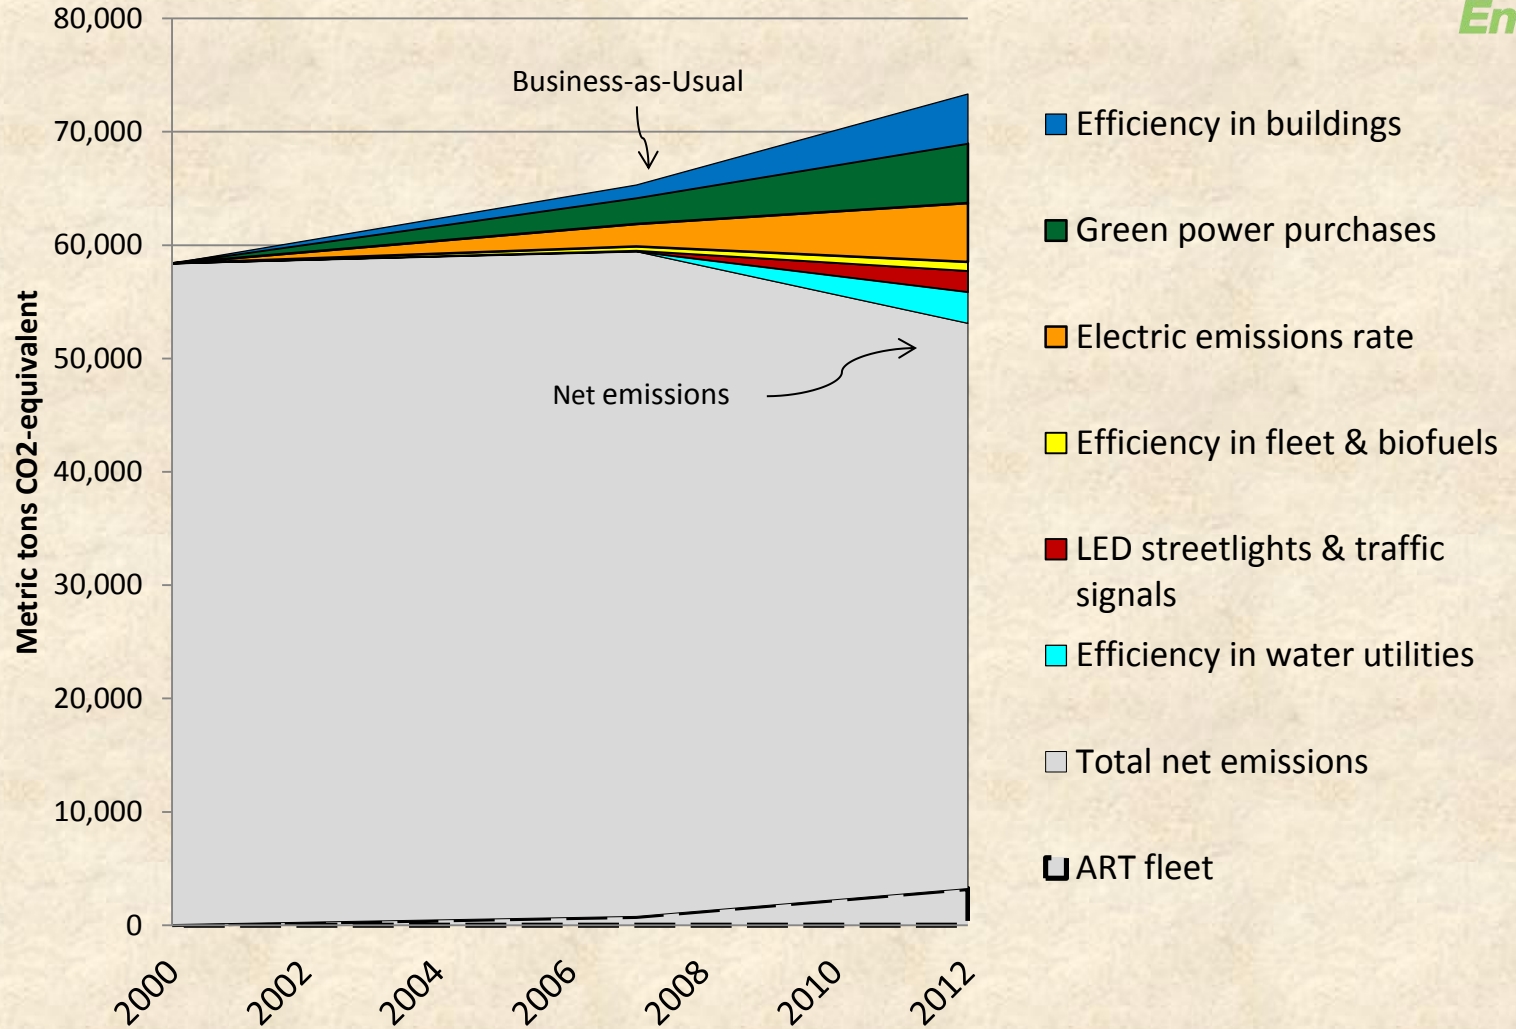

Arlington County exceeded its goal to reduce 10% of greenhouse gas emissions from County government operations. In 2007, we set the goal and launched the Arlington Initiative to Reduce Emissions (AIRE) to help us get there. As a result, the County has seen a decrease in net emissions from government activities of 11.7% between 2000 and 2012. A detailed technical report on greenhouse gas emissions by Arlington County government activities is available here on our web site. The highlights below focus on the AIRE goal and its achievement, particularly considering the increases in services to the community over the past 12 years.

Arlington faced a significant challenge in achieving our goal. Since 2000, the County added many large facilities, expanded our transit service, and upgraded our wastewater treatment facility to meet ever-stricter standards. Thanks to a successful, multifaceted strategy of improved energy efficiency and use of cleaner fuels, we overcame these hurdles to achieve our 10% goal. If we had not implemented these measures, the County's carbon footprint would have grown by 25% to over 73,000 metric tons by 2012, instead of declining nearly 12%. In addition, in County buildings alone, annual energy and water costs would have been about \$850,000 higher in 2012 if efficiency measures taken since 2007 were not in place.

The County's multifaceted approach to reducing greenhouse gas emissions offers valuable... County services and operations continue to grow... the community.

Building Energy Report Cards

Under the AIRE program, Arlington County made a commitment to reduce emissions from its own operations by 10% by 2012. As a county government, buildings are just a part of the total energy use but offer substantial opportunities to reduce energy consumption, and therefore emissions, without compromising essential services.

Thanks to continued investments in energy efficiency and employee engagement, the County is successfully reducing its buildings carbon footprint. The County is tracking progress in each building using report cards. The report card shows information including:

- ▣ Basic building characteristics
- ▣ Annual electric and natural gas use
- ▣ Site and source energy use intensity
- ▣ Carbon footprint
- ▣ EPA ENERGY STAR Ratings

The Arlington County building portfolio includes 67 buildings, most of them owned and operated by the County. Our inventory totals over 2.3 million square feet of floor area. These buildings have a variety of uses that fall into primary space types listed below. Click on a space type to see information on the buildings in that category.

Old heat pumps

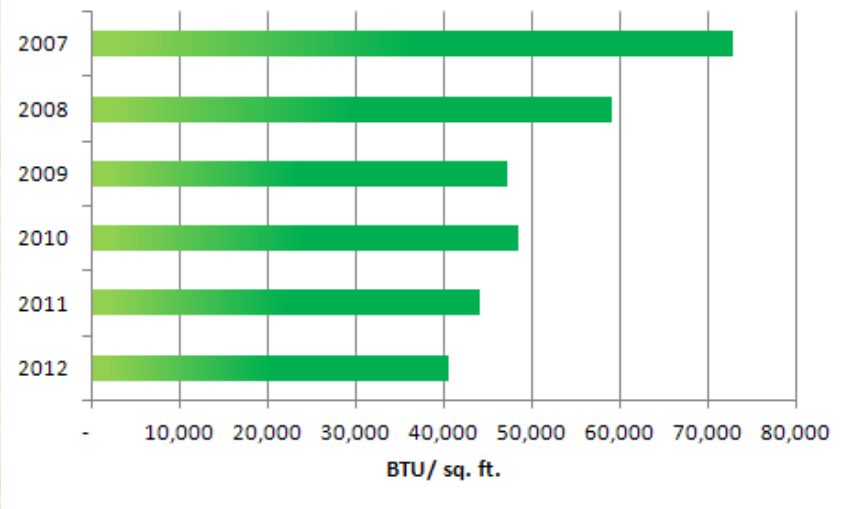

New heat pumps

At the Cherrydale Library, the AIRE program and Facilities Management retrofitted the lighting in 2008, realizing a 15% cut in electricity use. In 2009 AIRE replaced the aging heat pumps with new, ENERGY STAR qualified models, and replaced an electric tank water heater
