

Federal Energy Management Program

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

FEMP FIRST THURSDAY SEMINARS
What you need to know...online, live, and anytime.

Combined Heat and Power for Energy Resource Optimization
Instructors: Patti Garland, Oak Ridge National Laboratory
Bob Slattery, Oak Ridge National Laboratory
FEMP Expert: David Catarious

FEMP
Federal Energy Management Program

1 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Objectives/Competency Development

After completing this seminar, the learner will be able to:

- Define CHP for on-site power generation
- Discuss potential benefits of CHP for the learner's site or facility including whether the site has characteristics that make CHP cost-effective
- Discuss "prime mover" and "thermally activated technologies," including the advantages and limitations of specific technology options
- Conduct a feasibility analysis to inform the technical feasibility and cost effectiveness of implementing a CHP project
- Understand best practices and lessons learned from CHP projects in the Federal government
- Consider the potential financing vehicles including CHP as part of an ECM in ESPCs, UESCs, and PPAs

Combined Heat and Power Definition and Concept

4 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

What Is Combined Heat and Power?

CHP is an *integrated energy system* that:

- is located at or near a facility
- generates electrical and/or mechanical power
- recovers waste heat for
 - heating
 - cooling
 - dehumidification
- can utilize a variety of technologies and fuels
- is also referred to as cogeneration

4 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Defining Combined Heat and Power (CHP)

Conventional CHP
(also referred to as Topping Cycled CHP)

- Simultaneous generation of heat and electricity
- Fuel is combusted/burned for the purpose of generating electricity
- Waste heat from generation process is recovered to provide useful thermal
- Normally sized for thermal load
- HRSG can be supplementary fired for larger steam loads
- Low emissions – natural gas

5 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Defining Combined Heat and Power (CHP)

Waste Heat to Power CHP
(also referred to as Bottoming Cycle CHP)

- Fuel first applied to produce useful thermal energy for the process
- Waste heat is utilized to produce electricity and possibly additional thermal energy for the process
- Simultaneous generation of heat and electricity
- No incremental emissions if no additional fossil fuel fuel combusted
- Normally requires high temperature (>500°F)

Energy intensive industrial process

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

What Are the Benefits of CHP?

Benefits to Federal Facility	National Benefits
Reduced energy costs	Low-cost approach to new electricity generation capacity
Reduced risk of electric grid disruptions and greater grid security	Lessens need for new T&D infrastructure
Stability related to uncertain electricity prices	Enhances US manufacturing competitiveness
Immediate path to increased energy efficiency and reduced GHG emissions	Uses abundant, domestic energy sources
	Uses highly skilled local labor and U.S. technology

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY Energy Efficiency & Renewable Energy

CHP Recaptures Much of that Heat, Increasing Overall Efficiency of Energy Services

The diagram shows two parallel paths for energy generation. The top path uses a Power Plant (32% efficiency) which produces 30 units of electricity. The bottom path uses a Boiler/Furnace (80% efficiency) which produces 45 units of heat. A CHP system (75% efficiency) captures both the 30 units of electricity and the 45 units of heat from these processes. The combined efficiency of the separate processes is approximately 50%, while the CHP system achieves a combined efficiency of approximately 75% by recapturing the heat.

16 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Prime Mover

Reciprocating Engines

- 5 kW – 10 MW
- Excellent part-load operation
- Waste heat recovered from engine exhaust, engine jacket and oil coolant
- Low set-up cost, fast start-up
- Emissions signature has improved significantly
 - Lean-burn engines
 - Selective catalytic reduction (SCR)

18 | FEMP First Thursday Seminars

femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Primer Mover

Combustion Gas Turbine

- 5 MW - 250 MW
- Same technology as a jet engine
- Best suited for base-load (24/7) operations
- Typically fueled by natural gas
- Produce high quality heat from exhaust

19 | FEMP First Thursday Seminars

femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Primer Mover

Micro Turbines

- Small turbines with recuperation
- 25 kW to 500 kW
- Efficiency range: 25% to 30% LHV
- Recoverable heat: gas exhaust @ approx. 500°F
- Fuel flexible
- Low emissions <0.49lbs/MWh or 9ppm

20 | FEMP First Thursday Seminars

femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

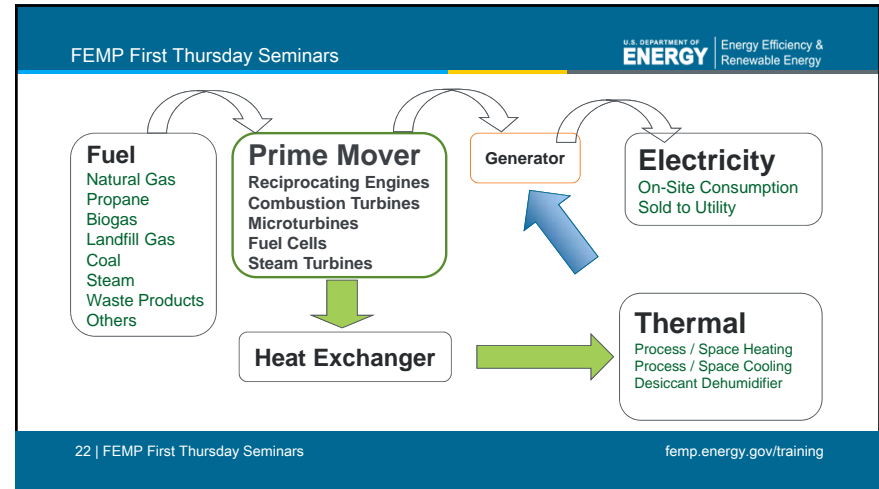

Primer Mover

Fuel Cells

- 5 kW – several MWs
- Generates power and heat through electrochemical reactions
- Very quiet, no combustion or shaft movement
- Environmentally cleanest CHP technology
- Different kinds:
 - Phosphoric acid
 - Solid oxide
 - Molten carbonate
 - Proton exchange membrane

21 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Two Types of Generators

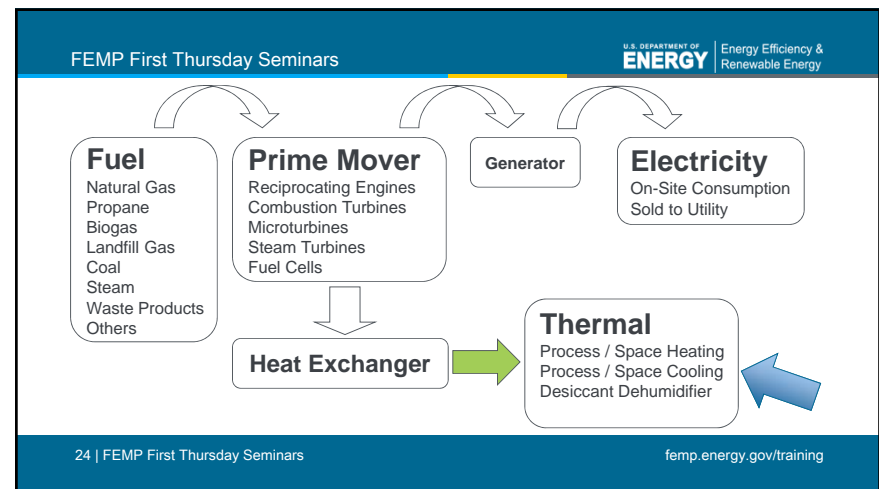

Induction

- **Requires External Power Source to Operate (Grid)**
- Contributes to Poor PF
- **When Grid Goes Down, CHP System Goes Down**
- Less Complicated & Less Costly to Interconnect
- Preferred by Utilities

Synchronous

- **Self Excited (Does Not Need Grid to Operate)**
- Can Assist in PF Correction
- **CHP System can Continue to Operate thru Grid Outages**
- More Complicated & Costly to Interconnect (Safety)
- Preferred by CHP Customers

23 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Heat Capture: Converting Heat into Work

Heat Exchangers

- Recover exhaust gas generated by:
 - Gas turbine
 - Industrial processes
- Transfers exhaust gas into useful heat (e.g., steam) for downstream applications
- Heat recovery steam generator (HRSG) the most common

Heat Recovery Steam Generator (HRSG)

25 | FEMP First Thursday Seminars

femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Heat Capture: Converting Heat into Work

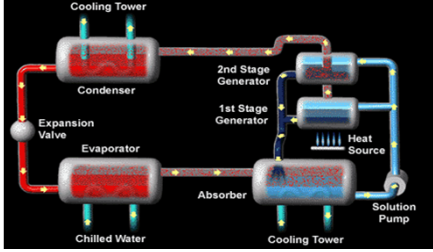

Heat-Driven Chillers (Absorption)

- Use “waste” heat to chill water for A/C, cooling machinery
- More efficient, fewer emissions vis-à-vis electric chillers

ABSORPTION CHILLERS

Use exhaust gas, hot water, or steam via thermal compressor to boil water vapor out of lithium bromide/ water solution and compress refrigerant to higher pressure; avoids CFCs/HCFCs

Range: 10-3,000 tons

26 | FEMP First Thursday Seminars

femp.energy.gov/training

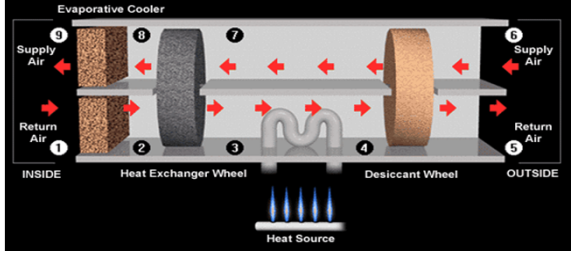

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Heat Capture: Converting Heat into Work

Desiccant Dehumidifiers

- Separates Latent from Sensible Load
- Reduces Humidity and Reduces AC Load

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Screening and Preliminary Analysis Feasibility Analysis Investment Grade Analysis Procurement, Operations, Maintenance

Screening Questions

- Do you pay more than \$.06/kWh on average for electricity (including generation, transmission and distribution)?
- Are you concerned about the impact of current or future energy costs on your operations?
- Are you concerned about power reliability?
What if the power goes out for 5 minutes... for 1 hour?
- Does your facility operate for more than 3,000 hours per year?
- Do you have thermal loads throughout the year?
(including steam, hot water, chilled water, hot air, etc.)

37 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Screening Questions (cont.)

- Does your facility have an existing central plant?
- Do you expect to replace, upgrade, or retrofit central plant equipment within the next 3-5 years?
- Do you anticipate a facility expansion or new construction project within the next 3-5 years?
- Have you already implemented energy efficiency measures and still have high energy costs?
- Are you interested in reducing your facility's impact on the environment?
- Do you have access to on-site or nearby biomass resources?
(i.e., landfill gas, farm manure, food processing waste, etc.)

38 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Screening: Likely Candidates for CHP

- Traditional buildings with hydronic distribution systems (steam or hot water and chilled water)
- Key locations
 - Military installations
 - Office buildings
 - Hospitals
 - Labs and Data Centers
 - Prisons

39 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Screening and Preliminary Analysis Feasibility Analysis Investment Grade Analysis Procurement, Operations, Maintenance

A Feasibility Analysis typically involves

- Electrical load profiling
- Thermal load profiling
- New utility rate structure analysis
- Unit sizing
- Thermal use determination (what to do with the heat)
- Installation cost estimations

40 | FEMP First Thursday Seminars femp.energy.gov/training

A Feasibility Analysis typically involves (cont).

- Permitting impacts
- Utility interconnection requirements
- Financial calculations (simple payback, ROI, etc.)
- Financing option availability
- Analysis of different ownership structures with recommendations as to project structure
- Discussion of design/construction models
- Cost/savings information can then compared to what your facility would pay if the CHP system were not installed

Example Challenges for CHP Projects

- Financial uncertainty
- CHP cost and performance uncertainty
- Regulatory uncertainty
- Utility uncertainty

**Utility Partnership Considerations****Permitting, Tariffs, Rate Impacts**

- Identify the state and local requirements for permitting a CHP plant early in the planning process.
- Identify potential impacts on utility rates under a CHP scenario – the availability, cost, and supply pressure of natural gas are issues that should be considered early in a feasibility study.

**Investment Grade Analysis**

- Generally involves contracting with a design engineering firm
- Results in design specs that can become part of an RFP
- Consider best technologies
- May include a utility required “interconnect study”
- Consider balance-of-plant items such as piping, stack breaching, platforms, electrical switchgear, steam piping, pumps, etc.
- For small projects, may use feasibility study rather than IGA

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Screening and Preliminary Analysis

Feasibility Analysis

Investment Grade Analysis

Procurement, Operations, Maintenance

➔

Procurement

- Project financing (covered later in presentation)
- Permits – number and complexity vary
- Emissions – site vs. source considerations
- Interconnection – varies from state to state
- Operations and Maintenance: in-house, contractors, or both

45 | FEMP First Thursday Seminars femp.energy.gov/training

Financing Options

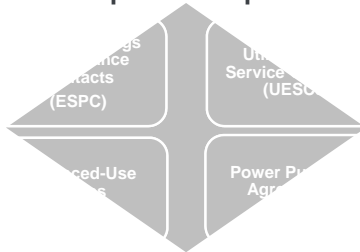

46 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Financing Vehicles Used to Get Energy Services/Improvements for Federal Facilities Without Up-Front Capital Costs

47 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

What are ESPCs?

ESPCs are contracts that allow Federal agencies to procure facility improvements with no up-front capital costs and are paid for over time.

- Assesses the opportunities
- Incurs cost for implementing project
- Guarantees cost savings, equipment performance, standards of service

- Pays ESCO over term of contract from energy cost savings

48 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

ESPC Key Points

- Savings guarantees are mandatory
- Savings must exceed payments in each year
- Measurement and verification (M&V) is mandatory
- Contract term cannot exceed 25 years

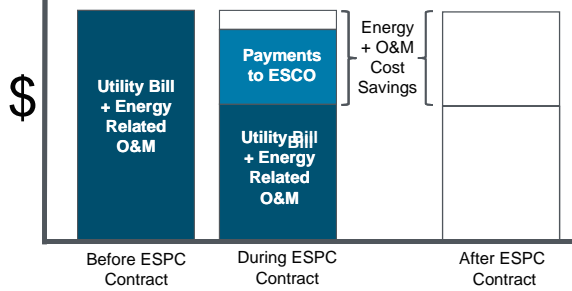

49 | FEMP First Thursday Seminars
femp.energy.gov/training

FEMP First Thursday Seminars U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

ESPC Payments

- **Key:** ESPCs are budget neutral
- ESPCs are paid from savings – guaranteed

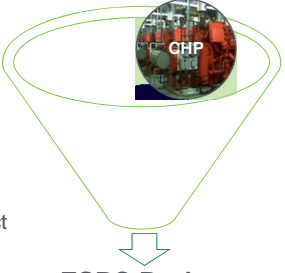

50 | FEMP First Thursday Seminars
femp.energy.gov/training

FEMP First Thursday Seminars U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

CHP Projects As Part of ESPCs

ESPC projects may consist of a wide range of possible Energy Conservation Measures (ECM)

- Example: DOE's ESPC program identifies 19 separate ECM technical categories
- CHP may be a single ECM under an ESPC project or part of a larger multi-ECM energy project

ESPC Project

51 | FEMP First Thursday Seminars
femp.energy.gov/training

FEMP First Thursday Seminars U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

What are UESCs?

Contracts that allow utilities to provide their Federal customer agencies with comprehensive energy and water efficiency improvements and demand-reduction services.

- Fronts the capital costs, if needed
- Assesses the opportunities
- Assures equipment performance and standards of service

- Pays utility over term of contract from cost savings achieved

A UESC is a Partnership

52 | FEMP First Thursday Seminars

FINANCIAL

Rebates/Incentives
Project Financing

42 USC 8256 (EPA Act 1992) authorizes the use of utility incentives

53 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

UESC Key Points

- A UESC can be any size
- A UESC can include a wide range of ECMs (depends on utility)
- UESCs may not be available to all facilities
- Utility may be new to this type of contracting
- Contract process and documents are not prescribed
- Agency's relationship with utility

54 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Other Funding Options: Enhanced Use Lease (EUL)

Under an EUL:

- a private developer leases underutilized property from the federal agency
- developer invests in equipment and improvements
- rent is paid by the developer in the form of in-kind services or cash
- A CHP based EUL might involve the lessee selling all or some of the power to the agency

55 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF ENERGY | Energy Efficiency & Renewable Energy

Financing of CHP at Federal sites has been prevalent for several years and across a broad spectrum of system capacities.

Financing Vehicles utilized:

- ESPC
- UESC
- EUL

-
-
-

DOE Savannah River Biomass

CHP Technology

- (2) Biomass fueled fluidized bed steam boilers
- (1) 20MW Steam condensing turbine
- Biomass fuel: wood chips (forest residues)

Financing

- Energy Savings Performance Contract (ESPC)
- \$795M contract /19 year performance term

58 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

Savannah River Biomass (cont.)

System Benefits

- Electric Capacity: 20MW (77MWh of "green" electricity generation)
- Thermal Capacity: 240,000 lb/hr of 850 psi steam (385 psi after turbine)
- Significant emissions reductions
 - 400 tons/yr particulate matter
 - 3,500 tons/yr SO₂
 - 100,000 tons/yr of CO₂
- 1,400,000 kgal/yr reduced water intake from the Savannah River

•Annual Savings: \$34.3M (energy and O&M)

59 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** | Energy Efficiency & Renewable Energy

**Veterans Administration:
San Diego Medical Center**

CHP Technology

- (1) 4.4MW Natural Gas Fired Turbine
- Heat Recovery Steam Generator (HRSG)
- Ultra lean premix combustion system (low NO_x)
- 500 Ton Absorption Chiller

Financing

- Energy Savings Performance Contract (ESPC)
- \$17M contract / 10 year performance term

4.4MW Solar Mercury 50 Turbine Generator

60 | FEMP First Thursday Seminars femp.energy.gov/training

FEMP First Thursday Seminars

U.S. DEPARTMENT OF **ENERGY** Energy Efficiency & Renewable Energy

Veterans Administration: San Diego Medical Center (cont.)

System Benefits

- Electric Capacity: 4.4MW (24MWh of electricity generation annually)
- Thermal Capacity: 11,000 lb/yr @ 130psig
- Ultra Low NOx emissions
 - Exceeds stringent air quality district emissions requirements
 - 40 tons/yr reduction

• **Estimated Annual Savings: \$1.6M**
