ILLINOIS

Electronic Handbook of Industrial Resources

WISCONSIN

November 2010

Introduction

This handbook provides a comprehensive listing of incentives, tools, and resources for industrial manufacturing energy efficiency in the state of Utah. The document is organized according to industrial system and features information on rebates, waived fees, tax credits, loans, and other resources, such as analysis tools, education and training programs, and energy assessments. The handbook is based on data available in the *States Incentives and Resources Database*, which is maintained by the U.S. Department of Energy (DOE) Industrial Technologies Program (ITP).

The *States Incentives and Resources Database* is a comprehensive searchable online database of approximately 3,100 energy efficiency incentives organized by state. The database is updated regularly and is accessible via the Save Energy Now State and Regional Partnerships' Web site:

http://www1.eere.energy.gov/industry/states/state_activities/incentive_search.aspx

State Industrial Overview

Wisconsin is home to 5.7 million residents. Wisconsin ranks 21st in the nation in terms of GDP, representing \$40.4 billion. In 2008, Wisconsin ranked 15th in the nation's industrial energy consumption at 619.0 trillion Btu and 16th in the nation's industrial natural gas consumption at 129.5 trillion Btu. Wisconsin's leading industries include food manufacturing, transportation equipment manufacturing, and machinery manufacturing. The industrial sector as well as the forest products and metal casting industries are the greatest energy consuming sectors in the state.²

Wisconsin's renewable energy resources include hydroelectric power potential from its many rivers, and ethanol production from its acres of corn fields. Coal dominates electricity generation in Wisconsin, fueling about two-thirds of the state's power plants.³

Exhibit 1 below compares the industrial energy consumption in Wisconsin in relation to the national average. The chart in Exhibit 2 is a visual representation of the same data.

Exhibit 1: Total Industrial Energy Consumption Statistics in Wisconsin

Year	Wisconsin Energy Consumption (Trillion Btu)	National Average (Trillion Btu)
2000	760.9	680.2
2001	685.5	642.8
2002	662.7	642.0
2003	659.9	639.6
2004	680.9	658.7
2005	658.5	696.7
2006	641.9	636.6
2007	636.8	637.0
2008	619	614.8

Exhibit 2: Total Industrial Energy Use

Federal and National Industrial Energy Efficiency Programs

In addition to the state level programs outlined in more detail in section III there are many government and non-government organizations that have resources to assist industry in the western region to utilize energy more effectively. Financial and technical resources are available from federal agencies, national laboratories, utilities, utility associations, industrial organizations, energy efficiency organizations, state energy offices, energy services companies, nonprofits or nongovernmental organizations, foundations, and private companies.

ITP is one such program that provides industrial manufacturers across the country with a variety of energy efficiency tools, resources, and incentives. ITP is a prime example of DOE's commitment to improving the energy efficiency of industrial operations in the United States. ITP is a multi-faceted outreach and deployment initiative designed specifically for industrial manufacturers. ITP supports research and development of energy efficient technologies, provides industry with energy management and assessment tools, resources, and information.

Several other federal agencies offer energy efficiency incentives in addition to the multitude of DOE resources. The Internal Revenue Service, for instance, provides tax incentives to industrial manufacturers that implement energy efficiency projects. In addition, the U.S. Environmental Protection Agency provides loans on new energy efficient construction and incentives on the implementation of combined heat and power systems. Finally, the U.S. Department of Agriculture is another federal agency that provides incentives to rural and small industrial operations seeking to become more energy efficient.

State Incentives by Industrial System

Building Systems

Cash for Conserving Program

Cash incentives are available for the purchase of energy efficient equipment, including appliances, lighting, and water heaters.

For More Information:

Contracted Direct Load Control

Wisconsin Public Service (WPS) installs a small switch on one or more pieces of electrical equipment in participating facility. This switch

cycles the equipment off and on, or disconnects it for brief periods of time, during high-demand periods or a power supply emergency. In exchange for participation, a facility receives credits on its WPS bill based on the amount of load WPS manages and the time of year the managed equipment is operating.

Sponsor Type: Utility

Load Management Program

Load management is a voluntary program available to both homes and businesses. Participating members allow St. Croix to manage the supply of electricity to specific pieces of equipment during times of peak electric use. For example, members participating in load management on central air conditioning units allow St. Croix to cycle their air conditioner off and on in 15-minute increments during peak use periods, usually only on the hottest days of summer in the middle to late afternoons. Allowing the co-op the flexibility to manage demand helps contribute to large-scale conservation efforts.

For More Information:
<http://sccenet.net/off-peak-load-management.htm>

Sponsor: St. Croix Electric Cooperative
Sponsor Type: Utility

Load Management Programs

To help reduce energy use, the cooperative offers several programs to lower a customer's energy load. Programs include cash incentives and 7% interest loans.
