Introduction

This handbook provides a comprehensive listing of incentives, tools, and resources for industrial manufacturing energy efficiency in the state of Montana. The document is organized according to industrial system and features information on rebates, waived fees, tax credits, loans, and other resources, such as analysis tools, education and training programs, and energy assessments. The handbook is based on data available in the States Incentives and Resources Database, which is maintained by the U.S. Department of Energy (DOE) Industrial Technologies Program (ITP).

The States Incentives and Resources Database is a comprehensive searchable online database of approximately 3,100 energy efficiency incentives organized by state. The database is updated regularly and is accessible via the Save Energy Now State and Regional Partnerships’ Web site: http://www1.eere.energy.gov/industry/states/state_activities/incentive_search.aspx

State Industrial Overview

Located in the western United States, Montana has a total of 1.0 million residents and is ranked 48th in the nation in GDP, representing $35.9 billion. In 2008, Montana ranked 43rd in the nation’s industrial energy consumption at 171.2 trillion Btu and 37th in the nation’s industrial natural gas consumption at 33.2 trillion Btu.¹

The state of Montana is rich in fossil fuels, including one-fourth of the US recoverable coal reserves. In general the state’s energy consumption is low, however, Montana’s economy is dominated by industrial manufacturing which is quite energy intensive.² Montana’s leading industries include wood product manufacturing, food manufacturing, and machinery manufacturing.³

Exhibit 1 below compares the industrial energy consumption in Montana in relation to the national average. The chart in Exhibit 2 is a visual representation of the same data.

Exhibit 2: Total Industrial Energy Use
Federal and National Industrial Energy Efficiency Programs

In addition to the state level programs outlined in more detail in section III there are many government and non-government organizations that have resources to assist industry in the western region to utilize energy more effectively. Financial and technical resources are available from federal agencies, national laboratories, utilities, utility associations, industrial organizations, energy efficiency organizations, state energy offices, energy services companies, nonprofits or nongovernmental organizations, foundations, and private companies.

ITP is one such program that provides industrial manufacturers across the country with a variety of energy efficiency tools, resources, and incentives. ITP is a prime example of DOE’s commitment to improving the energy efficiency of industrial operations in the United States. ITP is a multi-faceted outreach and deployment initiative designed specifically for industrial manufacturers. ITP supports research and development of energy efficient technologies, provides industry with energy management and assessment tools, resources, and information.

Several other federal agencies offer energy efficiency incentives in addition to the multitude of DOE resources. The Internal Revenue Service, for instance, provides tax incentives to industrial manufacturers that implement energy efficiency projects. In addition, the U.S. Environmental Protection Agency provides loans on new energy efficient construction and incentives on the implementation of combined heat and power systems. Finally, the U.S. Department of Agriculture is another federal agency that provides incentives to rural and small industrial operations seeking to become more energy efficient.

State Incentives by Industrial System

Building Systems

Appliance Program – General Services
Mission Valley Power wants to encourage businesses to replace old inefficient appliances and purchase ENERGY STAR® rated or better energy efficient appliances for new and replacement applications. Rebates are $50 per appliance.

Sponsor: Mission Valley Power
Sponsor Type: Utility

Integrated Design Lab
This lab serves as a technical resource in learning how to incorporate high-performance building practices into building designs.

Sponsor: BetterBricks
Sponsor Type: Other

Electric Hot Water Rebate Program
The utility is offering a rebate incentive of $5 per gallon toward the purchase of a Marathon high-efficiency hot water heater. The water heater must be purchased from Southeast Electric Cooperative to be eligible for the incentive.

For More Information: http://www.midrivers.com/~seco/services.htm
Sponsor: Southeast Electric Cooperative
Sponsor Type: Utility

Energy Sources

Air Source Heat Pump Rebate
Flathead Electric Cooperative offers rebates of $1,000 to commercial customers that purchase and install air-source heat pumps. The model must be listed on the cooperative’s list of approved models.

For More Information: http://www.flatheadelectric.com/energy/Rebates.html#
Sponsor: Flathead Electric Cooperative
Sponsor Type: Utility

Water Heater Rebate
Black Hills Power offers water heater rebates at $1 per gallon. In order to qualify for the rebate, the water heater must hold more than 30 gallons and produce less than 4,500 watts at 240 volts. The maximum rebate is $800 per customer.

For More Information: http://www.blackhillspower.com/cimktg.htm
Sponsor: Black Hills Power
Sponsor Type: Utility
Alternative Energy Investment Tax Credit
Commercial and net metering investments of at least $5,000 qualify for a tax credit up to 35%. The tax credit must be taken during the same year that the system is placed in service, unless the owner wants to extend the payment over a 7-year term. Manufacturers and plants are eligible for this tax credit. This tax credit cannot be taken in conjunction with other tax credits.
For More Information:
Sponsor: Montana Department of Environmental Quality
Sponsor Type: State

Alternative Energy Loan Program
The Alternative Energy Revolving Loan Program was established in Senate Bill 506. The program provides a financial incentive to homeowners and business owners to install renewable energy systems. Net metering is allowed. Terms and interest rates vary.
For More Information:
http://www.deq.state.mt.us/Energy/Renewable/altenergyloan.asp
Sponsor: Montana Department of Environmental Quality
Sponsor Type: State

E+ Renewable Energy Program
The goal of this program is to promote the development of renewable energy. Funding is available for solar, wind, and geothermal projects on a case-by-case basis.
For More Information:
Sponsor: Northwestern Energy
Sponsor Type: Utility

Green Tags Program
Northwest Solar Cooperative, a nonprofit organization managed by Cascade Solar Consulting, buys Green Tags at $0.02 per kWh for a system up to 50 kW in size. Photo-voltaic or small wind-generation systems qualify.
For More Information:
http://www.cascadesolar.com/greentagsfaq.htm
Sponsor: Northwest Solar Cooperative
Sponsor Type: Other

Ground Source Heat Pump
Rebates are available for the installation of ground heat pump systems. Rebates of $150 per ton up to $5,000 are available to commercial customers.
For More Information:
Sponsor: Yellowstone Valley Electric Cooperative
Sponsor Type: Utility

Heating and Cooling Program – General Services
Mission Valley Power provides rebate incentives to high usage customers to install advanced ground-source heat pumps and electric air source heat pumps for heating, cooling, ventilation, and air conditioning.
For More Information:
http://www.missionvalleypower.org/mission-valley-power-energy-conservation-2010-2/
Sponsor: Mission Valley Power
Sponsor Type: Utility

Microbusiness Loan Program
Microbusiness loans are available to small businesses that generate renewable energy.
For More Information:
Sponsor: Montana Department of Commerce
Sponsor Type: State

Net Metering
The utility is offering customers retail price for electricity generated from renewable systems up to 10 kW in size.
For More Information:
http://www.flatheadelectric.com/energy/netmeter.html
Sponsor: Flathead Electric Cooperative
Sponsor Type: Utility

Net Metering
Commercial and residential customers can reduce energy bills and add energy to the cooperative’s electric distribution system through net metering. If a customer produces more energy than what is used, the utility issues a credit for the unused energy.
For More Information:
http://www.lincolnelectric.coop/netmetering.htm
Sponsor: Lincoln Electric Cooperative
Sponsor Type: Utility

Net Metering
Net metering is available to members that want to interconnect a renewable generator with a nameplate capacity of not more than 10 kW. Net metering allows electricity generated in excess of use to flow back onto the grid and offset any electricity used from the cooperative.
For More Information:
Sponsor: Park Electric Cooperative
Sponsor Type: Utility
New or Expanded Industry Tax Credit
Commercial customers are eligible for this tax credit on the installation of an alternative energy production system on a building. In order to qualify as an expanded business, the number of employees must have increased by at least 30% since the renewable system's installation. The credit is 1% of wages paid to the new employees during the first 3 years of operation.

Sponsor: Montana Department of Revenue
Sponsor Type: State

Property Tax Exemption for Buildings Using Renewable Energy
Business owners are eligible to take tax credits up to $100,000 of the assessed value of alternative energy generation equipment for 10 years following installation of the renewable energy system.

Sponsor: Montana Department of Revenue
Sponsor Type: State

Property Tax Exemption for Renewable Generating Facilities Over 1 MW
If a plant generates more than 1 MW of renewable energy, it is eligible for this program. After installation, the facility will be taxed at 50% of its taxable value during the first 5 years, up to its full taxable value after 10 years. If owned by a utility, it will be taxed on 6% of assessed value, or 3% if owned by a cooperative, or 3.07% if owned by another business during the first year of operation.

Sponsor: Montana Department of Revenue
Sponsor Type: State

Property Tax Exemption for Renewable Generating Facilities under 1 MW
If a renewable energy facility generates less than 1 MW, it is exempt from property taxes for 5 years after its installation. The property would be taxed on 6% of assessed value if owned by a utility, or 3% if owned by a cooperative or other business.

Sponsor: Montana Department of Revenue
Sponsor Type: State

Renewable Production Grant
Bonneville Environmental Foundation provides grants for renewable energy projects.

Sponsor: Bonneville Environmental Foundation
Sponsor Type: Nonprofit

Renewable Research and Development Grants
Grants are available for renewable resource research and development projects to be conducted in Montana.

Sponsor: Montana Department of Environmental Quality
Sponsor Type: State

Renewable Resource Grant and Loan Program
On a biennial basis, the Department of Natural Resources and Conservation reviews proposals for renewable energy production and recommends projects to the legislature for funding.

Sponsor: Montana Department of Natural Resources and Conservation
Sponsor Type: State

Energy Efficiency Projects
The utility's sister company, Constellation Energy Projects & Services Group, helps commercial customers develop solutions to achieve energy goals.
