Electronic Handbook of Industrial Resources

IOWA

November 2010

Introduction

This resource provides a comprehensive listing of incentives, tools, and resources for industrial manufacturing energy efficiency in the state of Iowa. It is organized according to industrial system and features information on rebates, waived fees, tax credits, loans and other resources such as analysis tools, education and training programs, and energy assessments. It is based on data available in the *States Incentives and Resources Database*, maintained by the U.S. Department of Energy's (DOE) Industrial Technologies Program (ITP).

The *States Incentives and Resources Database* is a comprehensive searchable online database of approximately 3,100 energy efficiency incentives organized by state. The database is updated regularly and is accessible via the *Save Energy Now* State and Regional Partnerships' Web site:

http://www1.eere.energy.gov/industry/states/state_activities/incentive_search.aspx

State Industrial Overview

Iowa has total of 3.0 million residents and ranks 30th in the nation in terms of GDP, which is \$135.7 billion. The state is home to three Fortune 500 companies. In 2008, Iowa ranked 13th in the nation for industrial energy consumption at 654.1 trillion Btu and 12th in the nation for industrial natural gas consumption at 158.7 trillion Btu.¹ Iowa is both the largest producer of ethanol and the leading state in generation of electricity from wind turbines.²

Exhibit 1 below compares the industrial energy consumption in Iowa in relation to the national average. The chart in Exhibit 2 is a visual representation of the same data.

Exhibit 1: Total Industrial Energy Consumption Statistics in Iowa

Year	Iowa Energy Consumption (Trillion Btu)	National Average (Trillion Btu)
2000	510.6	680.2
2001	481.0	642.8
2002	490.0	642.0
2003	475.6	639.6
2004	529.8	658.7
2005	555.2	696.7
2006	572.5	636.6
2007	627.1	637.0
2008	654.1	614.8

Exhibit 2: Total Industrial Energy Use

Federal and National Industrial Energy Efficiency Programs

In addition to the state level programs outlined in more detail in section III there are many government and non-government organizations that have resources to assist industry in the western region to utilize energy more effectively. Financial and technical resources are available from federal agencies, national laboratories, utilities, utility associations, industrial organizations, energy efficiency organizations, state energy offices, energy services companies, non-profits or non-governmental organizations, foundations, and private companies.

ITP is one such program that provides industrial manufacturers across the country with a variety of energy efficiency tools, resources, and incentives. ITP is a prime example of DOE's commitment to improving the energy efficiency of industrial operations in the United States. ITP is a multi-faceted outreach and deployment initiative designed specifically for industrial manufacturers. ITP supports research and development of energy efficient technologies, provides industry with energy management and assessment tools, resources, and information. It also provides no-cost energy assessments to industrial plants of all size.

Several other federal agencies offer energy efficiency incentives in addition to the multitude of DOE resources. Internal Revenue Service, for instance, provides tax incentives to industrial manufacturers that implement energy efficiency projects. In addition, the U.S. Environmental Protection Agency provides loans on new energy efficient construction and incentives on the implementation of combined heat and power systems. Finally, the U.S. Department of Agriculture is another federal agency that provides incentives to rural and small industrial operations seeking to become more energy efficient.

State Incentives by Industrial System

Industrial Systems General

Advanced Building

This program offers technical resources and information on how to build an energy efficient new facility.
