FY 2006 PROGRESS REPORT FOR ADVANCED COMBUSTION ENGINE TECHNOLOGIES

Energy Efficiency and Renewable Energy
Office of FreedomCAR and Vehicle Technologies

Approved by Gurpreet Singh

Team Leader, Advanced Combustion Engine R&D
Office of FreedomCAR and Vehicle Technologies

December 2006

Acknowledgement

We would like to express our sincere appreciation to Alliance Technical Services, Inc. and Oak Ridge National Laboratory for their technical and artistic contributions in preparing and publishing this report.

In addition, we would like to thank all the participants for their contributions to the programs and all the authors who prepared the project abstracts that comprise this report.

Table of Contents

I.	Introduction	1
	Developing Advanced Combustion Engine Technologies	3
	Project Highlights	10
	Future Directions	17
II.	Advanced Combustion and Emission Control Research for High-Efficiency Engines	25
II.1	Stretch Efficiency in Combustion Engines with Implications of New Combustion Regimes (<i>Oak Ridge National Laboratory</i>)	27
II.A	Combustion and Related In-Cylinder Processes	33
II.A.1	Light-Duty Diesel Spray Research Using X-Ray Radiography (<i>Argonne National Laboratory</i>)	33
II.A.2	Low-Temperature Automotive Diesel Combustion (<i>Sandia National Laboratories</i>)	37
II.A.3	Multi-Diagnostic In-Cylinder Imaging and Multi-Dimensional Modeling of Low-Temperature Heavy-Duty Compression-Ignition Combustion (<i>Sandia National Laboratories</i>)	41
II.A.4	Fuel Effects on Conventional and Low-Temperature, Compression-Ignition Combustion Processes (<i>Sandia National Laboratories</i>)	47
II.A.5	Soot Formation under High-EGR LTC Conditions (<i>Sandia National Laboratories</i>)	53
II.A.6	Achieving High Efficiency Clean Combustion (HECC) in Diesel Engines (<i>Oak Ridge National Laboratory</i>)	57
II.A.7	Large Eddy Simulation Applied to Low-Temperature and Hydrogen Engine Combustion Research (<i>Sandia National Laboratories</i>)	61
II.A.8	Detailed Modeling of HCCI and PCCI Combustion and Multi-Cylinder HCCI Engine Control (<i>Lawrence Livermore National Laboratory</i>)	67
II.A.9	HCCI and Stratified-Charge CI Engine Combustion Research (<i>Sandia National Laboratories</i>)	72
II.A.10	Automotive HCCI Combustion Research (<i>Sandia National Laboratories</i>)	77
II.A.11	Spark-Assisted HCCI Combustion (<i>Oak Ridge National Laboratory</i>)	82
II.A.12	Development of High Efficiency Clean Combustion Engine Designs for Spark-Ignition and Compression-Ignition Internal Combustion Engines (<i>GM Powertrain Advanced Engineering</i>)	86
II.A.13	KIVA-4 Development (<i>Los Alamos National Laboratory</i>)	90
II.A.14	Chemical Kinetic Modeling of Combustion of Automotive Fuels (<i>Lawrence Livermore National Laboratory</i>)	93
II.A.15	Achieving and Demonstrating FreedomCAR Engine Fuel Efficiency Goals (<i>Oak Ridge National Laboratory</i>)	97
II.A.16	Free-Piston Engine Research (<i>Sandia National Laboratories</i>)	101
II.A.17	In-Cylinder Hydrogen Combustion Visualization in a Non-Optical Engine (<i>Argonne National Laboratory</i>)	104
II.A.18	OH* Chemiluminescence Measurements in a Direct-Injection Hydrogen Engine (<i>Sandia National Laboratories</i>)	107
II.A.19	Low-Temperature Combustion Using Pre-Mixed Charge Compression Ignition (<i>Cummins Inc.</i>)	112
II.A.20	High Efficiency Clean Combustion Advanced Combustion Report (<i>Caterpillar, Inc.</i>)	116
II.A.21	Low Temperature Combustion Demonstrator for High Efficiency Clean Combustion (<i>International Truck and Engine Corporation</i>)	122
II.A.22	Heavy-Duty Stoichiometric Compression Ignition Engine with Improved Fuel Economy over Alternative Technologies for Meeting 2010 On-Highway Emissions (<i>John Deere Power Systems</i>)	127

II.	Advanced Combustion and Emission Control Research for High-Efficiency Engines (Continued)	
II.A	Combustion and Related In-Cylinder Processes (Continued)	
II.A.23	Demonstration of Air-Power-Assist (APA) Engine Technology for Clean Combustion and Direct Energy Recovery in Heavy-Duty Applications (<i>Volvo Powertrain North America</i>)	132
II.B	Energy Efficient Emission Controls	135
II.B.1	Fundamental Studies of NO _x Adsorber Materials (<i>Pacific Northwest National Laboratory, Cummins Inc., and Johnson Matthey</i>)	135
II.B.2	Mechanisms of Sulfur Poisoning of NO _x Adsorber Materials (<i>Pacific Northwest National Laboratory</i>)	142
II.B.3	Characterizing Lean NO _x Trap Regeneration and Desulfation (<i>Oak Ridge National Laboratory</i>)	147
II.B.4	Development of Chemical Kinetics Models for Lean NO _x Traps (<i>Sandia National Laboratories</i>)	152
II.B.5	Advanced Engine/Aftertreatment System R&D (<i>Oak Ridge National Laboratory and International Truck and Engine Corporation</i>)	156
II.B.6	Advanced CIDI Emission Control System Development (<i>Ford Research & Advanced Engineering</i>)	160
II.B.7	Fundamental Sulfation/Desulfation Studies of Lean NO _x Traps, DOE Pre-Competitive Catalyst Research (<i>Oak Ridge National Laboratory and Cummins, Inc.</i>)	164
II.B.8	NO _x Control and Measurement Technology for Heavy-Duty Diesel Engines (<i>Oak Ridge National Laboratory</i>)	170
II.B.9	Off-Highway Engine Emission Control with High System Efficiency (<i>Oak Ridge National Laboratory and Deere & Company</i>)	173
II.B.10	Discovery of New NO _x Reduction Catalysts for CIDI Engines Using Combinatorial Techniques (<i>General Motors Corporation, Research and Development Center</i>)	176
II.B.11	Efficient Emissions Control for Multi-Mode Lean DI Engines (<i>Oak Ridge National Laboratory</i>)	179
II.B.12	NO _x Control for High Power Density Hydrogen Engine (<i>Oak Ridge National Laboratory</i>)	184
II.B.13	Cross-Cut Lean Exhaust Emission Reduction Simulation (CLEERS) (<i>Oak Ridge National Laboratory</i>)	189
II.B.14	CLEERS DPF Modeling (<i>Pacific Northwest National Laboratory</i>)	196
II.B.15	Innovative Emission Control Device Renewal (<i>General Motors Corporation - Powertrain Division</i>)	201
II.C	Critical Enabling Technologies	204
II.C.1	Variable Valve Actuation (<i>Delphi Automotive Systems</i>)	204
II.C.2	Low-Cost Fast-Response Actuator for Variable Compression Ratio Engines (<i>Envera LLC</i>)	207
III.	Heavy Truck Engine	211
III.1	Heavy-Duty Truck Engine Program (<i>Cummins Inc.</i>)	213
III.2	Heavy Truck Engine Project (Heavy Truck Clean Diesel, HTCD) (<i>Caterpillar Inc.</i>)	216
III.3	Heavy-Duty Engine Technology for High Thermal Efficiency at EPA 2010 Emissions Regulations (<i>Detroit Diesel Corporation</i>)	219
IV.	Waste Heat Recovery	225
IV.1	Developing Thermoelectric Technology for Automotive Waste Heat Recovery (<i>GM Research and Development Center</i>)	227
IV.2	High-Efficiency Thermoelectric Waste Energy Recovery System for Passenger Vehicle Applications (<i>BSST LLC</i>)	232
IV.3	Cost-Effective Fabrication Routes for the Production of Quantum Well Structures and Recovery of Waste Heat from Heavy Duty Trucks (<i>United Technologies Research Center</i>)	237

IV.	Waste Heat Recovery (Continued)	
IV.4	Thermoelectric Conversion of Waste Heat to Electricity in an IC Engine Powered Vehicle (<i>Michigan State University</i>)	242
IV.5	Exhaust Energy Recovery (<i>Cummins Inc.</i>)	247
IV.6	Very High Fuel Economy, Heavy Duty, Constant Speed, Truck Engine Optimized via Unique Energy Recovery Turbines and Facilitated by a High Efficiency Continuously Variable Drivetrain (<i>Mack Trucks Inc.</i>)	251
V.	Off-Highway Engine Efficiency R&D	255
V.1	Exhaust Aftertreatment and Low-Pressure Loop EGR Applied to an Off-Highway Engine (<i>John Deere Product Engineering Center</i>)	257
V.2	Electrically Coupled Exhaust Energy Recovery System Using a Series Power Turbine Approach (<i>John Deere Product Engineering Center</i>)	260
VI.	Health Impacts	265
VI.1	Health Effects from Heavy-Duty Diesel Emissions at the Watt Road Environmental Laboratory (<i>Oak Ridge National Laboratory</i>)	267
VI.2	Weekend Ozone Effect Studies (<i>National Renewable Energy Laboratory</i>)	271
VI.3	Health Impacts: Respiratory Response (<i>Lovelace Respiratory Research Institute</i>)	275
VI.4	The Advanced Collaborative Emissions Study (ACES) (<i>Health Effects Institute</i>)	280
VII.	University Research	283
VII.1	University Consortium On Low-Temperature Combustion For High-Efficiency, Ultra-Low Emission Engines (<i>University of Michigan</i>)	285
VII.2	Optimization of Low-Temperature Diesel Combustion (<i>University of Wisconsin-Madison</i>)	292
VII.3	Low Temperature Combustion with Thermo-Chemical Recuperation to Maximize In-Use Engine Efficiency (<i>West Virginia University</i>)	298
VII.4	Kinetic and Performance Studies of the Regeneration Phase of Model Pt/Ba/Rh NOx Traps for Design and Optimization (<i>University of Houston</i>)	302
VII.5	Investigation of Aging Mechanisms in Lean-NOx Traps (<i>University of Kentucky</i>)	306
VII.6	Improved Engine Design Concepts Using the Second Law of Thermodynamics: Reducing Irreversibilities and Increasing Efficiencies (<i>Texas A&M University</i>)	310
VII.7	High-Compression-Ratio Atkinson-Cycle Engine Using Low-Pressure Direct Injection and Pneumatic-Electronic Valve Actuation Enabled by Ionization Current and Forward-Backward Mass Air Flow Sensor Feedback (<i>Michigan State University</i>)	315
VIII.	Abstracts of Newly Awarded Projects	319
VIII.1	Application of Wide Spectrum Voltammetric Sensors to Exhaust NOx Measurement (<i>Streamline Automation, LLC</i>)	321
VIII.2	Start-of-Combustion Sensor for HCCI Engines (<i>TIAX, LLC</i>)	322
VIII.3	On-Board Engine Exhaust Particulate Matter Sensor for HCCI and Conventional Diesel Engines (<i>The University of Texas at Austin & Cummins Engine Company</i>)	323
VIII.4	The Development of a Robust Accelerometer-Based Start of Combustion Sensing System (<i>Westport Power, Inc.</i>)	324
IX.	Acronyms and Abbreviations	325
X.	Index of Primary Contacts	331
